DATASHEET

Theora 360™

Cloud applications and platform

The Theora 360 Platform delivers powerful applications that are driven by machine learning, artificial intelligence and highly precise data – all contained in the cloud for maximum efficiency and security. Theora 360's state of the art platform collects real-time, precision data that is used to deliver extremely accurate information and analytics to keep business operations at top performance.

Theora360 scales to cover small buildings and few people, or large campuses and hundreds of people with equal precision. A 360 degree view provides spatial awareness of individuals and devices - movement, proximity, time/motion analytics, and interactions to deliver proactive and reactive responses.

Powerful platform to deliver insights from data

Theora 360™ is a powerful cloud platform built to bring it all together. Data from any source from wearables to health and wellness monitoring devices, combined with highly precise Ultra Wideband networks with pinpoint accuracy for people and equipment is available. Real-time analytics can show normal or abnormal patterns and even predict outcomes. New data can be compared to historical data to determine acceptable ranges and provide alerts when ranges are exceeded.

Use the latest in machine learning and artificial intelligence

Theora 360 has powerful machine learning to constantly adapt to changing conditions, especially during rapidly changing events. Artificial intelligence provides a look forward as well, with constant improvement for people and business operations.

Theora 360 is highly flexible and can integrate both frontline and back office technology to add new capabilities to companies existing infrastructure to better respond to both opportunities and disruptions.

Bring the power of precision 3D tracking to your business

Clairvoyant Networks brings a unique capability with our leadership in Ultra Wideband technology and applications to deliver what you need to know with extreme precision. When you need to know exactly where your people and equipment are, you need UWB technology to pinpoint location, motion, and activity in 3D. Clairvoyant Networks' UWB solutions are highly efficient, scalable and cost-effective. Our UWB scales to cover small buildings and fewer people to large campuses and thousands of people with equal precision, seeing through walls and doors to provide every person with the added assurance that their workplace environment is operating at peak performance.

The powerful insights provided by Clairvoyant Networks Theora 360™ gives companies in healthcare, manufacturing, construction or any high volume customer business unparalleled views of people, location proximity and movement. With this unparalleled level of precision, companies can be both proactive and reactive to evolving business conditions now and in the future.

With Theora 360, enterprises can optimize response to today's challenges, with flexibility for tomorrow's challenges.
